

RAHUL SINGH

Software Engineer

rahulsouravsingh0205@gmail.com | 7992288731 | linkedin.com/in/rahulsingh | github.com/rahulsingh

EDUCATION

Sarala Birla University

B.Tech in Computer Science and Engineering – CGPA: 8.24

Jharkhand, India

2020 – 2024

Higher Secondary School (CBSE Board)

Percentage: 88.4%

2019 – 2020

GATE CSE 2025

Qualified – Score: 443

EXPERIENCE

Brightcode Software Services

On-Site

Full-Stack WordPress Engineer | Backend PHP, Custom APIs & Dynamic Frontend Architecture Apr 2026 – Present

- Architect and develop full-stack WordPress solutions, engineering custom PHP plugins and themes from scratch to deliver highly tailored, scalable web applications aligned with complex client specifications.
- Design and expose secure custom REST API endpoints using the WordPress REST API framework, enabling seamless third-party service integrations and headless frontend consumption with JSON-based dynamic content delivery.
- Build modular, component-driven frontend interfaces using JavaScript (ES6+), HTML5, and CSS3, leveraging Elementor Pro for advanced page composition while extending it with custom widgets and dynamic template logic.
- Implement performant backend logic in PHP including custom post types, taxonomies, meta boxes, and WP_Query optimizations to support complex data architectures and dynamic content workflows.
- Manage full deployment lifecycle on production environments — configuring server-side caching, database optimization, and CDN integration to achieve high Lighthouse performance scores and sub-2s load times.
- Collaborate directly with clients to translate business requirements into technical specifications, delivering iterative builds with version-controlled codebases using Git for clean, maintainable project histories.
- Enforce web security best practices including input sanitization, nonce verification, user capability checks, and SQL injection prevention across all custom PHP development.

Codefreex

On-Site

WordPress Developer & Backend Integrator

Dec 2025 – Apr 2026

- Engineered high-performance web applications and custom platforms featuring dynamic service delivery structures, custom pricing grids, and interactive user interfaces.
- Developed custom PHP shortcodes and hooked into Advanced Custom Fields (ACF) to bypass ecosystem layout limitations, maximizing site flexibility and layout speed.
- Integrated external and local REST APIs for asynchronous data loading, improving client-side rendering times and structural modularity.
- Supervised environment migrations, site security auditing, and web server optimizations to guarantee minimum latency and seamless deployment shifts.

Made A Way Pvt. Ltd.

Hybrid

Subject Matter Expert (Computer Science)

May 2025 – Oct 2025

- Served as an advanced technical consultant for Chegg, authoring deeply analytical solutions to complex algorithmic, database structural, and architectural software queries.
- Provided precise code implementations, debugging strategies, and optimizations in C++, Java, and Python alongside targeted relational database normalization strategies.
- Maintained an exceptional accuracy rating by applying rigorous testing metrics to code answers prior to documentation delivery.

Ardent Computech Pvt. Ltd.

Remote

Data Science Intern

June 2023 – July 2023

- Developed an AI-powered Resume Screening System using Python, Pandas, and NLP pipelines to automate talent parsing workflows.

- Implemented text tokenization, preprocessing pipelines, and TF-IDF vectorization to extract structural features from unstructured resume bodies.
- Evaluated classification performance using precision, recall, and F1-score benchmarks to optimize semantic match accuracy against targets.

PROJECTS

Engineers Edge | *PHP, MySQL, JavaScript, Component Architecture* 2023

- Designed and implemented a full-stack digital content management platform providing granular material categorization and optimized global searching for engineering branches.
- Engineered a secure relational database layer in MySQL with user capability structures for seamless management portal actions and secure asset uploads.
- Optimized asynchronous components and UI rendering rules, radically reducing page payload processing times across asset heavy workflows.

COVID-19 Diagnostic Analytics Platform | *Python, Pandas, NumPy, Matplotlib* 2023

- Built an exploratory data analysis pipeline utilizing Pandas and NumPy to scrub, manipulate, and structure global transmission arrays from unorganized public logs.
- Engineered localized predictive mathematical models and dynamic statistical plots to forecast structural pattern anomalies and vector velocities.

SKILLS & TOOLS

Languages & Frameworks: PHP, JavaScript (ES6+), Python, Java, C, Bash Scripting, HTML5, CSS3, React

WordPress Ecosystem: Core Architecture, Custom Plugin Development, Theme Development, Hooks/Filters, ACF, WP_Query, Elementor Extensions

Databases & Systems: MySQL, Relational Database Design, Query Optimization, Git, Linux (Ubuntu, Kali), Advanced Debugging (ADB)

Security & Performance: Input Sanitization, Nonce Verification, OWASP Top 10 Mitigation, WP-CLI, Redis/Memcached Caching, REST APIs
